

# COLORADO RV SERVICE

## 💧 RV WATER SYSTEM PACKAGES 💧

De-Winterize It Right. Clean. Safe. Ready.

After a Colorado winter, your RV water system isn't just "off"... it's contaminated, dry, and at risk. From basic start-up → fully safe, sanitized, and trip-ready.

---

### 🏆 BASIC WATER START-UP- 💰 \$179 – \$229

“Gets It Flowing”

- ✓ Reset all water system valves
- ✓ Pressurize system (tank or city water)
- ✓ Leak check – fresh water side
- ✓ Visual waste system leak check
- ✓ Run all fixtures (sinks, shower, toilet)
- ✓ Water pump test
- ✓ City water connection check

⚠️ **No sanitization or tank cleaning** 🙌 *Best for recently used RVs only*

### 🥈 SANITIZED WATER SYSTEM - MOST POPULAR 💰 \$349 - \$449

“Clean, Safe, and Ready to Use”

- ✓ Everything in Basic PLUS:

#### 💧 2-DAY FULL SYSTEM SANITIZATION

- Sanitizer run through ALL water lines & fixtures
- Proper dwell time to kill bacteria (Day 1)
- Full flush & refill with clean water (Day 2)

#### 🔥 HOT WATER TANK FLUSH & CLEANING

- Drain & flush sediment buildup
- Improve heating efficiency
- Extend tank life

🙌 **90% of RVs need after winter storage** 💡 *If your RV sat all winter—this is the right choice*

# COMPLETE WATER SYSTEM + SAFETY \$499 - \$649

**“No Surprises on Your First Trip”**

✓ Everything in Sanitized PLUS:

## **Water Heater Start-Up & Burner Test**

**“Make sure you actually HAVE hot water when you need it.”**

- Ignite and test burner operation (LP mode)
- Verify proper flame pattern (no soot, clean burn)
- Check ignition sequence and safety shut-off
- Inspect burner tube for debris, mud daubers, or blockage
- Check for leaks at fittings and connections

 *Prevents no-hot-water surprises and unsafe burner operation on your first trip*

## **Propane Leak Test (Manometer Test)**

**“The only way to KNOW your propane system is safe.”**

- Perform full system pressure test using a manometer
- Verify system holds pressure over time (no hidden leaks)
- Check all LP connections, fittings, and appliances
- Detect slow leaks you cannot smell or hear
- Confirm regulator performance and pressure consistency

 *Protects against fire risk, appliance damage, and dangerous LP leaks*

## **Full System Pressure Stability Check**

**“Find hidden leaks BEFORE they cause damage.”**

- Pressurize entire water system (pump and/or city water)
- Inspect fittings, connections, and common failure points
- Evaluate pump cycling (short cycling = hidden leak warning)
- Verify system maintains stable pressure under load

 *Identifies small leaks that turn into major water damage later*  *Ensures your water system AND supporting systems are fully operational*

Skipping proper de-winterization can lead to:  Hidden leaks behind walls  Bacteria in your water system  Water heater damage from sediment  Expensive mid-season repairs
